leanDNC

LEANDNC

The complete DNC system for small and medium size companies.
leanDNC - in combination with the low-priced DITB-601 network adapters - is an extremely reliable Windows-based network-DNC system that has been installed many hundred times all over in the world. Thank to its low price it pays back the investment within a few months.

Easy-to-use program management

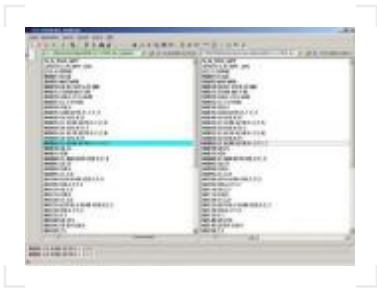

SCD-S Smart Communication Device

DNC FUNCTIONALITY

- Program request from keyboard of the controller with a dummy program, alternatively with barcode reader or handheld terminal
- Safe data transfer via network - wireless in WLAN IEEE802.11b or cablebound
- Data transfer always with the highest possible speed that is supported by the controller
- Suits all machines with serial interface and CNCs with PC-based controllers with built-in network card

- Includes user friendly data management with smart program Ids
- Compares automatically newly saved part programs with existing ones and highlights all modifications
- Optional Production Data Management for graphics, text files, AVI files and documents of any kind
- Detailed transaction log
- Transaction statistics
- Interface to all CAM systems, tool management systems and presetters
- Expandable with no limit
- etc.

COMFORTABLE PROGRAM MANAGEMENT

Most of the tasks that usually are executed by a PC operator are executed by the *leanDNC*, as it works according to the motto: everything possible to be automated should be done by the computer and only where decisions have to be taken should be left to the operator. All duties are accessible by a simple mouse click. This saves the person in charge up to 80% of its usual program handling, as only special cases have to be treated by the operator.

FREE DEMO VIA INTERNET

A demo lasts about 30 minutes. Please send us an e-mail to make an appointment: <mailto:info@quinx.com>
